

BIM-LCA

JUN 2023 NEWSLETTER

Kick off Meeting 19th-21st October 2022, Fredrikstad (Norway)

We started with the first meeting discussing one of the main objective of this project, that is the creation of didactic material for University students to be trained in **BIM (Building Information Modelling)** and **LCA (Life Cycle Analysis)** methodology to assess the sustainability of different construction materials and become drivers of change in the sector towards a sustainable construction model that uses natural and recycled materials, reducing the environmental impact and thus complying with the objectives of the **EU guidelines**.

Learning Activity 31st-2nd February 2023, Cartagena (Murcia)

The **master classes** were given by professionals and teachers from the **three participating countries** on BIM and LCA, as well as lectures on the use of these technologies/software and the impact on the environment.

The event took place at the UPCT facilities, with **students from Norway, Romania and Spain**, from Østfold University College (HiØ), Technical University of Cluj Napoca and Universidad Politécnica de Cartagena

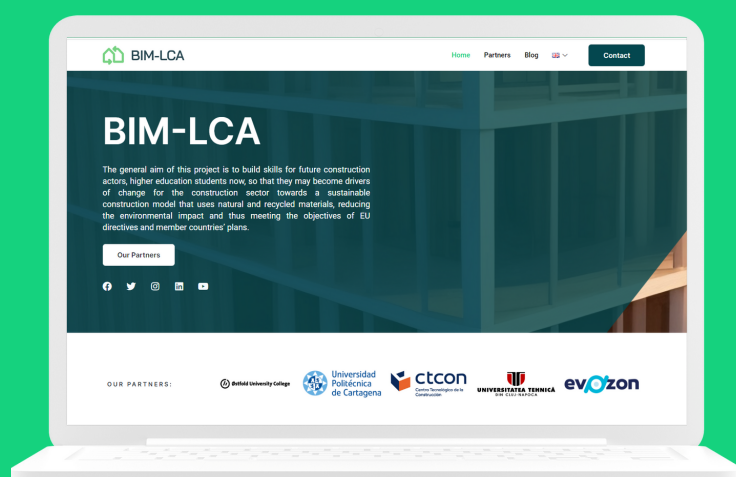

The Learning Activity focused on: **BIM and its tools** such as Cype, Revit, Tekla and ARD; and **LCA in construction and LCA tools** at material, product, element and building level.
